

With MarShield, a barrier means progress!

MarShield's Portable & Stationary Radiation Shielding Barriers offer value and affordability with mobility and versatility

MarShield is proud to introduce our newly re-designed portable & stationary radiation shielding barriers by using forward thinking and the newest materials available. MarShield has effectively re-invented the traditional shielding barriers currently offered in the market place. MarShield has been successful in providing a cost conscience barrier without sacrificing the safety requirements for both patients and personnel.

MarShield manufactures standard Radiation Shielding Barriers in portable and stationary units, as well as custom designed units in other configurations and sizes. Used in applications such as desk shielding, temporary walls, patient and station dividers etc. Our full body shielding barriers can be constructed to protect one, two or more medical personnel from harmful secondary radiation in areas such as examination rooms; operating rooms; emergency rooms, intensive and cardiac care units; radiology and X-ray labs, mammography, diagnostic imaging and nuclear medicine suites.

All MarShield barriers include a shatter resistant and optically clear acrylic viewing panel in the top portion with a solid opaque panel in the bottom. The radiation shielding barriers are available in a many different sizes with bottom panels available in a variety of colours. The bottom panels incorporate a single un-pierced sheet of ASTM B-29 lead of desired thickness laminated between the two panels. Complete stainless steel models are available on request.

Heavy-duty outrigger type legs with, non-marking swivel casters are an integral part of the design in all shields. The swivel casters easily lock into the desired position when required. Our Stationary models are equipped with pre-drilled anchoring pads for fastening the unit directly to the floor. All shields leave fully assembled in a palletized box for ease of handling, while offering maximum protection during transit.

When safety and security are your main priorities think MarShield.
