

MarShield now offers a room with a view to radiation safety

MarShield Modular X-ray Control Booths are available customized to your specific requirements or manufactured from stock sizes. Our lead lined barriers provide the correct degree of radiation protection and safety you need, while offering a distortion free panoramic view of your patient and equipment with lead equivalencies ranging from 0.5mm to 2mm.

These modular barriers incorporate a strong, durable and lightweight lead-lined bottom panel and clear lead acrylic viewing top panel. Our solid bottom panels are 1 ½” thick providing space savings for tight-fit applications. Steel construction and powder coated to your required colour scheme, easily mixed and matched to suit any décor.

MarShield can fabricate your booth with large continuous viewing windows to 6’ x 8’ or larger on special request. Assembly is always easy, allowing units to be fully installed in just a few days. Our design incorporates neatly hidden hardware under snap-on tie channels with all channels guaranteed to be leak free, making the finished control booth visually appealing in any facility. Local installation is available or alternatively we will ship the units fully crated and wrapped for maximum protection to your site.

Should the need arise, you can modify, change, rearrange, add to or subtract from your booth at any time without expensive labour or repair costs.

MarShield X-ray shielding modular booths offer the ultimate in design possibilities at competitive prices, with quick deliveries. We know about lead lining like no one else. MarShield, is the name to remember for all your radiation protection needs.
